after the running of the program portion has begun and under control of the

program portion at the client, converting the cryptographically protected data to an

unprotected form and selectively controlling access to copy or save functions at the

client in respect of the data in its unprotected [at] form.

---

28.   (Amended)   A server for providing access to data sets in a protected

form, the server comprising:

an input for receiving a request for access to a data set;

protecting means for cryptographically protecting the requested data set; and

generating means for generating a program portion for sending to the source of

the access request,

wherein said program portion is operable and after the program portion is

permitted to run at the source of the access request, in use:

to generate a request for access to the cryptographically protected data

set;

on receipt of the cryptographically protected data set, to convert it into
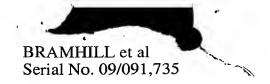

an unprotected form; and

to selectively control access to copy or save functions in respect of the

data set when in said unprotected form.

---

30.   (Amended)   A method of protecting data downloaded from a server

computer to a client computer, said method comprising:

downloading a protected copy of requested data from a server to a client; and

running a program at the client so that after running the program at the client

has begun at the client, the program serves to both: (a) unprotect the downloaded data

thereby to provide access to an unprotected copy of the requested data, and (b)

suppress client computer copy and save functions with respect to the unprotected copy

of the requested data.

Please add the following new claims.

--31. (New) A method of protecting data sent from a server to a client, said

method comprising:

running a program portion at the client, the program portion generating and

uploading to the server a request for access to data;

cryptographically protecting the data;

sending the cryptographically protected data to the client; and

after access to the program portion is permitted; and

under control of the program portion, converting the cryptographically

protected data to an unprotected form and restricting or preventing access to copy or

save functions at the client in respect of the data in its unprotected form.

32. (New) A server for providing access to data sets in a protected form, the

server comprising:

an input for receiving a request for access to a data set;

protecting means for cryptographically protecting the requested data set; and
